Eat today, die tomorrow 1

FEATURE

Mince from low-cost fish species, by V. Venugopal 2
The under-utilization of low-cost fish species, caught as by-catches of commercial fishing operations, has been a source of controversy for some time.This article considers the possibility of manufacturing foods for human consumption from the mince of low-cost fish species.

REVIEWS

Capillary electrophoresis: a new analytical tool for food science, by Michael Zeece 6
Capillary electrophoresis is a powerful technique that combines the advantages of separation techniques such as high-performance liquid chromatography with those of electrophoresis. An advantage of the technique is that eluent fractions can be collected for further study.

Microbial biosynthesis for the production of food flavours, by J.M. Belin, M. Bensoussan and L. Serrano-Carreon 11
There is presently a strong preference among consumers for natural flavours which, in many cases, are expensive. This review examines the potential for the biosynthesis of natural flavouring materials by microbial cultures.

Detection of lipid hydroperoxides by high-performance liquid chromatography coupled with post-column reaction, by G.C. Yang 15
The detection and measurement of lipid peroxidation in foods has traditionally involved techniques that make it difficult to determine the nature of the lipid components being oxidized. The combination of chromatographic separation of lipid components with post-column reaction with conventional reagents is a useful approach to improving the analysis of oxidized foods.

CONFERENCE REPORT

Authentication and quality assessment of food products, by John O'Brien 19
Authenticity testing is an important and growing area of food analysis. The major trends in the area were covered at this meeting held in October 1991.

BOOK REVIEWS

Food Polymers, Gels, and Colloids (E. Dickinson, ed.), by P. Sherman 23

Plant Cell and Tissue Culture (A Stafford and G. Warren, eds), by Nicholas J. Walton 23

Free Radicals and Food Additives (O.I. Aruoma and B. Halliwell, eds), by Karen M. Schaich 24

Developments in Food Proteins – 7 (B.J.F. Hudson, ed.), by Ricardo Bressani 25

FEBRUARY

FEATURE

A new group of food colorants, by F.J. Francis 27
Anthocyanins are among the most important and most attractive natural pigments in foods. This Feature examines the potential of the acylated B-ring-substituted anthocyanins for use as stable natural food colorants.

REVIEWS

Caseinophosphopeptides and calcium bioavailability, by David D. Kitts and Yvonne V. Yuan 31
A group of bioactive peptides derived from casein, known as caseinophosphopeptides, are being intensely studied at present for their ability to promote the bioavailability of calcium from foods.

The applications of lectins in food analysis, by P.D. Patel 35
Lectins are proteins or glycoproteins that react with a high degree of specificity with particular sugar residues. Such specificity can be exploited in analytical procedures.

Molecular methods for typing bacterial food pathogens, by Richard Earnshaw and Julia Gidley 39
Bacterial typing is an important step in epidemiology studies and in food quality control investigations. This review examines the new molecular typing methods that are beginning to replace or complement conventional procedures.

BOOK REVIEWS SUPPLEMENT

Microemulsions and Emulsions in Foods (M. El-Nokaly and D. Cornell, eds), by Yoshinori Mine **44**

Vitamin Intake and Health (S.K. Gaby, A. Bendich, V.N. Singh and L.J. Machlin), by C.J. Bates **44**

Flow Injection Analysis (FIA) Based on Enzymes or Antibodies (R.D. Schmid, ed.), by A. Maquieira and R. Puchades **45**

Immunoassays for Trace Chemical Analysis: Monitoring toxic chemicals in humans, food, and the environment (M. Vanderlaan, L.H. Stanker, B.E. Watkins and D.W. Roberts, eds), by Craig M. Zwickl **46**

Protein Absorption: Development and Present State of the Science (D.M. Matthews), by A. Jackson **47**

Biological Trace Element Research: Multidisciplinary Perspectives (K.S. Subramanian, G.V. Iyengar and K. Okamoto, eds), by Cindy Davis **48**

Sweeteners: Discovery, Molecular Design and Chemoreception (D.E. Walters, F.T. Orthoefer and G.E. Dubois, eds), by Gordon Birch **48**

Technology of Biscuits, Crackers and Cookies (2nd edn) (D. Manley), by R. Carl Hoseney **49**

Food Additive User's Handbook (J. Smith, ed.), by Susanne E. Keller **49**

Making Safe Food: A Management Guide for Microbiological Quality (W.F. Harrigan and R.W.A. Park), by Mara Stecchini **50**

The Chemistry and Technology of Cereals as Food and Feed (2nd edn) (S.A. Matz), by Y. Pomeranz **50**

Interactions of Food Proteins (N. Parris and R. Barford, eds), by Naotoshi Matsudomi **51**

BOOKS RECEIVED **51**

MARCH

EDITORIAL

Genetic engineering: a rough ride ahead? **53**

FEATURE

Genetic engineering of crops: its relevance to the food industry, by J.L. Jones **54**
Research in recent years has led to tremendous advances in the tools available for genetic engineering. This Feature examines the scope of current research on the genetic engineering of crops and assesses its implications for the food industry.

REVIEWS

Anti-browning agents: alternatives to the use of sulfites in foods, by Radha Iyengar and Arthur J. McEvily **60**
Despite the efficacy of sulfites in preventing the browning of foods, there has been uncertainty about their safety for many years. Several safer alternatives to the use of sulfites have been evaluated and some are now available commercially.

Biochemical interactions of food-derived peptides, by E.N. Clare Mills, Marcos J.C. Alcocer and Michael R.A. Morgan **64**
Food-derived peptides have been the subject of much research interest over the past few years because of their possible physiological effects. This article reviews recent work in the area with particular emphasis on the effects of such peptides on the immune system.

Approaches to the detection of meat adulteration, by B.K. Barai, R.R. Nayak, R.S. Singhal and P.R. Kulkarni **69**
Meat adulteration has been a popular form of fraud for centuries. This review examines the major means of meat adulteration and the methods for their detection.

LETTERS

Problems in nutritional analysis, by D.A.T. Southgate **72**

Problems in nutritional analysis: reply, by John O'Brien **73**

BOOK REVIEWS

The Biotechnology of Malting and Brewing (J.S. Hough), by G. Murphy **74**

Automation in the Food Industry (C.A. Moore, ed.), by A. W. Bishop **74**

Seafood Safety (F.E. Ahmed, ed.), by Hjörleifur Einarsson **75**

Sugars in Nutrition (M. Gracey, N. Kretchmer and E. Rossi, eds), by Vincent Marks **75**

APRIL

EDITORIAL

The philosophy of food product development 77

FEATURE

Philosophical paradigms framing food science research, by D.J. Dzurec and L.C. Dzurec 78
This Feature analyses the philosophical bases of scientific inquiry and, in particular, of food research. It is suggested that many food scientists employ the postpositivist paradigm, which avoids the limitations of positivist philosophy by recognizing that a relationship exists between the inquirer and the object of inquiry.

REVIEWS

Microbiological safety of chilled foods: current issues, by Robert E. Brackett 81
Chilled foods have been a major growth area in recent years. However, the extended shelf life of chilled foods increases the opportunity for the growth of psychrotrophic pathogens.

Bitterness: reduction and inhibition, by Glenn Roy 85
There has been an explosion of knowledge in recent years about the molecular basis of sweet and bitter tastes. This article examines the prospects for bitterness reduction in foods and the possibility of designing novel bitterness inhibitors.

Natural pigments from red microalgae for use in foods and cosmetics, by S. (Malis) Arad and A. Yaron 92
Much work has been devoted recently to the search for natural food colorants. Among those that have been studied are the red and blue pigments from the red microalgae.

VIEWPOINT

Food preferences and the opioid peptide system, by Adam Drewnowski 97
Recent studies suggest that the pleasure response to foods high in sugar and fat, such as chocolate, may be mediated by the endogenous opioid peptide system. The theory is supported by the fact that the opioid antagonist naloxone appears to reduce preferences for fat–sugar mixtures.

BOOK REVIEWS

Food Product Development: From Concept to the Marketplace (E. Graf and I.S. Saguy, eds), by J. Löliger 99

Biotechnology of Plant Fats and Oils (J. Rattray, ed.), by Earl G. Hammond 100

Mutagens in Food: Detection and Prevention (H. Hayatsu, ed.), by W.P.M. Lloyd-Evans 100

Fundamentals of Food Process Engineering (2nd edn) (R.R. Toledo), by J.M. Bouvier 101

MAY

FEATURE

FLAIR-FLOW EUROPE: a dissemination route to the food industry and consumers, by Ronan Gormley 103
The background and structure of the FLAIR-FLOW EUROPE project for the dissemination of information on the FLAIR (Food-linked Agro-Industrial Research) programme to consumers and food companies are described.

REVIEWS

Approaches to making the food processing industry more environmentally friendly, by Hans P. Blaschek 107
Microbial and cell-free enzyme systems that bioconvert food processing wastes into value-added products offer the promise of both cost savings and a more environmentally friendly food industry.

Resistant starch, by Nils-Georg Asp and Inger Björck 111
The difficulties involved in defining, quantifying and determining the physiological effects of resistant starch are reviewed.

VIEWPOINT

Is atherosclerosis an autoimmune disease?, by Georg Wick, Roman Kleindienst, Hermann Dietrich and Qingbo Xu 114
While a high blood cholesterol level is an important risk factor in the development of atherosclerosis, it may not be the primary factor causing the disease. Following past Viewpoints on the effects of fish oil and of peroxidized lipids on the development of heart disease, this article presents an alternative hypothesis: that atherosclerosis is initiated by an autoimmune response.

LETTER

Mint tease and the cumulative antioxidant index, by Jim Duke 120

SOFTWARE REVIEW

C-Stat Version 1.0, by J.R. Piggott 121

BOOK REVIEWS

Principles and Practices for the Safe Processing of Foods (D.A. Shapton and N.F. Shapton, eds), by Larry R. Beuchat 122

Biotechnology of Amylodextrin Oligosaccharides (R.B. Friedman, ed.), by John F. Kennedy and Zilda M.B. Figueirido 122

Enzymes in Food Processing (G.A. Tucker and L.F.J. Woods, eds), by J.B. Adams 123

Nutrition and Behavior: New Perspectives (R.B. Kanarek and R. Marks-Kaufman), by Peter J. Rogers 123

Application of Ultrafiltration in the Dairy Industry (E. Renner and M.H. Abd El-Salam), by P.F. Fox 124

Developments in Meat Science – 5 (R. Lawrie, ed.), by Vivian Moore 124

EDITORIAL

Health claims and prospects for designer foods 127

FEATURE

A new model for food research: CAFT – Rutgers University, by J.L. Kokini, M. Solberg and F. Henrikson 128

Basic research under way at the Center for Advanced Food Technology (CAFT) demonstrates how a fundamental approach to understanding transport phenomena and other processes in food systems can improve our ability to control food processing parameters.

REVIEWS

Bacteriocins: applications in food preservation, by Frances M. Barnby-Smith 133

This review summarizes current knowledge of the characteristics and mode of action of the main bacteriocins with potential for use as natural food preservatives.

The effects of dietary oat products on blood cholesterol, by Cynthia M. Ripsin and Joseph M. Keenan 137

The strong, but not conclusive, evidence that dietary oat products may help reduce blood total cholesterol levels is examined. The effects of oat consumption appear to be most pronounced in post-menopausal women and in individuals with higher initial cholesterol levels.

New developments in rapid methods for food microbiology, by Daniel Y.C. Fung 142

Some recently developed techniques for the rapid and accurate enumeration and characterization of microorganisms are described and their performance assessed.

Preparation and food applications of physically modified starches, by Jay-lin Jane 145

The preparation, food applications and characteristics of physically modified starches are reviewed.

SOFTWARE REVIEW

Easy Plot, by A.V. Kurpad and M.L. Sheela 148

BOOK REVIEWS

Functional Properties of Food Components (2nd edn) (Y. Pomeranz), by Karen King 149

Food Enzymology, Volumes 1 and 2 (P.F. Fox, ed.), by Raymond R. Mahoney 149

Feta and Related Cheeses (R.K. Robinson and A.Y. Tamime, eds), by T.P. Guinee 150

Sweet taste: the big picture 153

FEATURE

The evolution of the word 'biotechnology', by Max J. Kennedy 154
Although the first recorded use of the word 'biotechnology' appears to have been in 1919, the term has only gained popularity in recent years, when it has become synonymous with the use and design of genetically engineered organisms.

REVIEWS

Estimation of the equilibrium water activity of multicomponent mixtures, by Micha Peleg and Mark D. Normand 157
Although the equilibrium water activity is a useful parameter for predicting the chemical and microbiological stability of foods, it is expensive and time-consuming to determine the water sorption isotherms of food systems. The cheaper and quicker alternative of using computer methods to predict the moisture sorption behaviour of food formulations is discussed in this review.

Texture of hard cheeses, by Frances R. Jack and Alistair Paterson 160
Cheese texture and flavour have traditionally been assessed by human subjective assessment. Recently, there has been much research interest into the factors that determine cheese texture, and instrumental methods of cheese quality assessment have been proposed in addition to more objective sensory methods.

Rapid non-microbiological methods for detecting microorganisms in foods, by M.S. Pishawikar, R.S. Singhal and P.R. Kulkarni 165
Traditional microbiological testing procedures are laborious and time-consuming. Consequently, there is much interest in the development of alternative rapid methods for detecting and enumerating microorganisms in foods.

VIEWPOINT

Kinetic models of sweet taste, by Daniel M. Ennis 169
There are numerous accounts in the literature of the receptor mechanisms of sweet taste. This Viewpoint addresses the transduction of sweet taste following receptor binding and borrows some well-defined principles from pharmacokinetics to incorporate both the reception and transduction processes.

BOOK REVIEWS

Food Allergy: Adverse Reactions to Foods and Food Additivies (D.D. Metcalfe, H.A. Sampson and R.A. Simon, eds), by Jean-Michel Wal 173

Packaging Foods with Plastics (W.A. Jenkins and J.P. Harrington), by George W. Halek 174

Encyclopedia of Fermented Fresh Milk Products (J.A. Kurmann, J.Lj. Rašić and M. Kroger), by C.L. Duitschaever 175

EDITORIAL

NMR applications in food research 177

REVIEWS

Introduction to NMR, by Marcus A. Hemminga 179

Determination of solid/liquid ratios of fats and oils by low-resolution pulsed NMR, by M.C.M. Gribnau 186

Applications of low-resolution pulsed NMR to the determination of oil and moisture in oilseeds, by Prem N. Gambhir 191

Applications of NMR to the characterization and authentication of foods and beverages, by Claude Guillou, Gérald Remaud and Gérard J. Martin 197

Rationale for using NMR to study water relations in foods and biological tissues, by Herman J.C. Berendsen 202

Introduction to NMR imaging, by A. Haase 206

Measurement of fat crystallization using NMR imaging and spectroscopy, by C. Simoneau, M.J. McCarthy, D.S. Reid and J.B. German 208

Measurement of moisture diffusion in foods using pulsed field gradient NMR, by Hisahiko Watanabe and Mika Fukuoka 211

Application of NMR imaging to the study of velocity profiles during extrusion processing, by Kathryn L. McCarthy, Robert J. Kauten and Cynthia K. Agemura 215

Perspective on the applications of NMR in nutrition, by Alan J. Fischman and Ronald G. Tompkins 220

Applications of ^{31}P NMR in the study of microbial metabolism, by Klaas Nicolay 225

High-resolution solid-state NMR of food materials, by Michael J. Gidley 231

Applications of NMR in sensory science, by Terri Robertson, Shelly Schmidt and Barbara Klein 236

Applications of NMR spectroscopy in meat research, by Christian Beauvallet and Jean-Pierre Renou 241

Overview of NMR applications in food science, by Steve Ablett 246

OCTOBER

EDITORIAL

Irradiated foods: new technology, old debate 251

REVIEWS

Peptide-specific Maillard reaction products: a new pathway for flavor chemistry, by Henry V. Izzo and Chi-Tang Ho 253
Amino acids bound in proteins and peptides may have a significant role in the generation of flavours in food during heating.

Progress in the identification of irradiated foods, by M.H. Stevenson 257
The development of methods for identifying irradiated foods may enhance consumer confidence in irradiation, and may help governments to enforce labelling regulations. The methods which are currently being developed are discussed in this review.

A role for monoclonal antibodies in the analysis of food proteins, by A. Paraf 263
Monoclonal antibodies can be used to detect structural changes in food proteins, and have specific applications in authenticity testing, characterization of fermentation starter cultures, and detection of food allergens.

Tracer studies of nutrient bioavailability using 'naturally enriched' ^{13}C-labelled substrates, by Brian A. McGaw 268
The stable carbon isotope ^{13}C has been used in studies of the bioavailability of nutrients such as sugars and complex carbohydrates.

pH of low-moisture solids, by Leonard N. Bell and Theodore P. Labuza 271
As the pH of low-moisture foods is not necessarily the same as that of the initial hydrated state, the modes and rates of deterioration of dehydrated products may differ from predictions based on higher moisture levels. Surface glass electrodes used without the addition of water give a better estimation of the pH of these foods.

BOOK REVIEWS

Modified Atmosphere Packaging of Food (B. Ooraikul and M.E. Stiles, eds), by Brian P.F. Day 275

Protein Immobilization: Fundamentals and Applications (R.F. Taylor, ed.), by Harold E. Swaisgood 275

NOVEMBER

FEATURE

European Hygienic Equipment Design Group (EHEDG) 277
An independent consortium, which includes representatives from the food industry, government and research institutes, has been set up to address the role of equipment design in the production of microbiologically safe food products.

REVIEWS

Methods for determining the adulteration of citrus juices, by Wilbur W. Widmer, Paul F. Cancalon and Steven Nagy 278
The adulteration of fruit juices continues to be a serious problem for juice manufacturers and regulatory bodies. The methods currently available for determining the adulteration of citrus juices are assessed.

Biosurfactants: moving towards industrial application, by Armin Fiechter **286**
Biosurfactants have advantages over chemically synthesized surface-active compounds in terms of their biodegradability and production. The current applications and future potential of biosurfactants are reviewed.

A role for transgenic animals in food production?, by T.G. McEvoy, J.J. Robinson and J.M. Sreenan **294**
The potential applications of transgenics to food production include the production of animals with disease resistance, increased growth and reproductive capacity, and improved digestion.

EHEDG UPDATE

Microbiologically safe continuous pasteurization of liquid foods **303**
The European Hygienic Equipment Design Group (EHEDG) has prepared guidelines for operating systems that allow the safe continuous pasteurization of liquid foods. An extended summary of the guidelines is featured.

BOOK REVIEWS

Experimental Methods in Food Engineering (S.S.H. Rizvi and G.S. Mittel), by Brian M. McKenna **308**
Analysis of Oilseeds, Fats and Fatty Foods (J.B. Rossell and J.L.R. Pritchard, eds), by F.W. Sosulski **308**

DECEMBER

FEATURE

Probiotic bacteria: myth or reality?, by M.G. O'Sullivan, G. Thornton, G.C. O'Sullivan and J.K. Collins **309**
Bacteria such as bifidobacteria and lactobacilli are believed to be beneficial to human and animal health. The claimed effects of probiotic bacteria are described and the currently available probiotic products are featured.

REVIEWS

Measurement of lipid oxidation in meat and meat products, by J. Ian Gray and Frank J. Monahan **315**
The principal methods used to assess lipid oxidation in meat are assessed. The commonly used TBA test is compared with alternative techniques.

Dietary modulation of colon cancer risk: the roles of fat, fiber and calcium, by John A. Lapré and Roelof Van der Meer **320**
Diet is considered to be one of the most important determinants of the risk of colon cancer. The possible protective roles of dietary fiber and calcium are reviewed.

EHEDG UPDATE

A method for assessing the in-place cleanability of food-processing equipment **325**
The European Hygienic Equipment Design Group has prepared guidelines for assessing the relative cleanability of the various components of food-processing equipment. An extended summary of the guidelines is featured.
